

Brushless Motor Propeller Adapter

Product ID: 570-80305

Overview

These propeller adapters, as included with the KEDA 1000kV Brushless Outrunner Motors (#750-90010), are designed for attaching a propeller to a brushless motor. Once mounted, an 8mm or adjustable wrench is all that's needed to attach or remove the propellers. This design is less likely to loosen than self-tightening propellers when used on motors with active braking (as in the ELEV-8 v3 Quadcopter).

Includes:

- (1) - Propeller Adapter, M5 thread, Aluminum
- (1) - Hex Nut, M5-0.8, Aluminum
- (1) - Washer, M5, 17mm OD, 3mm thick, Aluminum
- (4) - Flat Head Machine Screw, M2-0.4 x 12mm, Zinc-Plated Steel

This part is offered as a replacement piece for maintaining your ELEV-8 v3 Quadcopter (#80300).
